### Taking Mississippi's Telephones More Valuable!

At new rates, make these telephones your telephone more valuable—because you now have more and more people can call you. Southern Bell has increased its telephone system to serve more than 1,000,000 families in many Southern Bell workers have invested more material and labor for the telephone system, approximately 124,000 miles of telephone lines, over 72 million dollars.

The 14 million dollars a year paid by 4,239 telephone exchanges in Mississippi is spent mostly at home, due to the State's prosperity.

Telephone service in the lowest possible cost.

**Grade To Hold  
Summer Exercises**

**THE GRADE CLASS OF  
1958**  
Graduates at 8:30 A. M.  
Tuesday, June 10, 1958  
at the High School  
Auditorium, 1000 N. Main  
Street, Jackson, Mississippi

Walt James, Pauline, Wanda, Sue  
by Jean Corcoran, Peggy Garcia, Lucy  
Vincent, Gaudie, Mary, Alice Heitmann  
Henry, June Hartfield, Thomas Hill  
Cecil Ann Hobbs, Carol Jean Johnson,  
Doris, Linda, Thomas, Karl  
Heddy, Ann, Louise, Jean, MC Miller  
Michael, Miss, Henry, Paul, John, Jim  
Carole, Virginia, McDaniel, August, Ollie  
Mrs. Sue Ann Olson, Edward Lee Pook  
Mrs. Claude Koenig, Margarette Koenig  
Mrs. Betty Riddle  
Audience, Faculty, Dr. Paul Jones  
Counselors, Robert, Steve, Glenn  
and many others.

**Summer School**

**Classes Planned**

Day & Louis Central High School  
will conduct summer school as it has  
in past summers. This summer school  
will be confined to high school subjects  
of English, Mathematics, and  
History. Students make up their  
own review work.

**Top Honors At  
State Declamation**

On Saturday morning, May 9, at 9:30  
a.m. after winning at the district and  
regional declamation contests, Keith Tobin  
of, junior at Jackson High School,  
will compete in the state contest.  
The state contest will be held at the  
state fairgrounds at Jackson on May 10.  
Keith is the only student in the state  
to receive the highest honor at the state  
contest. The next rating went to a boy from  
the Northern Region. His rating was  
second, "excellent," good. Keith's rating  
was second by 2 points. Keith said, "The  
judges couldn't have been fairer."

**COPAHL CHEMIST WINS  
ACCLAIM FOR WORK**

Dr. E. R. Copahel, a native of Fort  
Monmouth, Miss., in 1954 and a graduate  
of Mississippi College in 1922, has  
won the 1958 Gold Medal for the  
Western Region in the competition of  
the American Chemical Society.

## Home Agent Notes

By SARAH L. WEAVER

**SPONGING** or "pillbugs" are about half an inch long and are dark gray and oval. They usually live under some shelter. You've seen them often as you moved boards or flower pots or decayed manure, or any other dark place where decay is in progress. When they are disturbed they roll themselves into the shape of a round pill. They may feed on the roots and tender portions of plants, as cardinals and sweetpeas. They sometimes become household pests when they congregate in large numbers in a basement. To control them, apply a 5 per cent DDT spray on dust to infested areas. Or use bait made by mixing nine parts of sugar and one part Paris Green. Sprinkle this dry mixture, sift lightly on the ground.

Now that hiding places are cleared out, get rid of all refuse.

**MARKING IRIS FOR MOVING** If you plan to move or regroup your iris, it is well to mark them while they are in bloom so you can identify them. In a different place, however, indicate each color.

If the plants are in their present location long enough to take root, then uproot and move them to the new location.

For a more effective garment of

hold fabric and everyday children's clothing have been spoiled by pressing over stains with a hot iron or plunging the item into hot wash water. A little cool water sponging, or soaking before washing, may save such waste. Stains that often respond to cool water treatment include those made by most non-greasy foods or beverages, fresh garden foliage that may contain tannin, mud and perspiration. For best success in removing stains, start while the stain is still fresh—before it dries if possible.

**Co. Agent's Notes**

**MILKING MACHINES**

Do not let electric power failures force you to milk by hand. Intake manifolds on cars, trucks and tractor engines will supply enough emergency vacuum to operate two or more milking units.

**VACUUM BRAIN ADAPTER**, which are available at most farm supply stores and agencies, can be installed permanently by cars and trucks. The place to attach the adapter is located between the engine and intake manifold.

Some engines have intake manifolds especially shaped with an opening and shut-off valve for operating milking machines.

Drive the car, truck or tractor up close to the milking barn and run a piece of regular milking machine vacuum hose from the fitting on the

intake manifold to the nearest stall cock or milker pipeline. Then proceed with the milking just as you would do with electric power.

Milking machines with magnetic pulsators cannot be operated in this way without special equipment.

\*\*\*

Good feeding to stimulate milk flow of nursing sows is important because this is the time when young pigs make the cheapest gains.

When the sow is brought back to full feed 10 days after farrowing, begin self-feeding a mixture that contains 70 pounds of ground shelled corn, 20 pounds of ground wheat or oats and 10 pounds of protein supplement.

If ear corn is fed in place of the ground shelled corn, provide all the sow will eat and feed four to five pounds of the other ground feed per day.

A simple mineral mixture and plenty of clean drinking water should be kept before the sow at all times.

\*\*\*

**ORCHARDS**

When fruit trees are over-laden, thinning the fruit is profitable. This year many peach trees will need such fruit thinning. It will help to increase the size of the fruit, improve the quality, reduce the incidence of limb and trunk breakage, and reduce disease.

Thin the fruit as soon as possible after the blossoms fall, but before the seeds begin to form. This occurs six to eight weeks after the bloom.

Fruit will be three-fourths to one inch in diameter at this time.

Do the thinning by hand. In this way you will get a more uniform size.

formed and defective fruits. However, FIRM GETS DEFENSE CONTRACT jarring and shaking the trees is fairly satisfactory.

After thinning, pick up the removed fruits and destroy them. This will help control insects and disease.

Many peach trees have set doubles this year. Where you find two peaches growing together, pick them off.

Peaches should be thinned to an average of four to six inches apart, apples and pears six to eight inches apart and plums two to four inches apart.

\*\*\*

### IRRIGATION ON PASTURES

If you plan to buy an irrigation system for your pastures, remember irrigated pastures can use two to three times as much fertilizer as unirrigated pastures.

Irrigation will pay not only during the summer, but it also can extend the grazing period from Spring pasture by as much as a month or six weeks.

One of the big payoffs is in fall and winter grazing. Irrigation will help get these crops up and growing early. In many cases, you will be grazing these when unirrigated pastures are not even up.

However, before buying an irrigation system, make sure of your water supply. See your local county agent for information on irrigation. Get him to call on the advice of members of the Agricultural Extension Service, agricultural engineers, and the advice of cultural experts.

Before you buy, make sure the you have all the necessary equipment.
